

Harvard Educational Review

LONGFELLOW HALL, 13 APPIAN WAY
CAMBRIDGE, MASSACHUSETTS 02138

December 20, 1968

Professor Joshua Lederberg
Department of Genetics
School of Medicine
Stanford University
Palo Alto, California

Dear Dr. Lederberg:

The Harvard Educational Review is planning a discussion of the concept of intelligence to be published in its Spring 1969 Issue. The focus for the discussion will be the enclosed article by Dr. Arthur Jensen (to be published in our forthcoming Winter Issue), which presents his views about the nature of intelligence and the extent to which it is modifiable.

We have assembled a group of respondents from diverse backgrounds to comment on the Jensen article. Thus far, Drs. Carl Bereiter, Jerome Kagan, David Elkind, Lee Cronbach and J. McV. Hunt have agreed to respond.

A. H. H. Stanford.

We invite you to participate as a respondent in this discussion. In view of Dr. Jensen's contentions concerning genetic influences on intelligence, the comments of a geneticist would add an important dimension not now present.

Responses should be approximately 8-12 typewritten pages in length. Our submission date for the Spring Issue is February 1.

One of our editors will contact you in a few days to see whether it will be possible for you to contribute to this discussion, which we hope will be an important contribution both to education and to the study of human development.

Sincerely,

Donald R. Moore
